

Validate social creative where it actually lives

INTRODUCING THE AD TESTING SIMULATOR

Place your ads in a realistic, scrollable feed to capture the behavioral metrics that actually drive growth—thumb-stop power, dwell time, and engagement. Get the behavioral truth of a live test with the experimental control of a survey.

Close the gap between testing and reality

Static images and video links can't predict real-world performance. We give you a faster, more cost-effective way to validate creative before you commit your media budget.

REDUCE THE RISK OF WASTED SPEND

Live A/B testing is expensive and slow. Validate your creative strategy early in the process with directional performance data. Fail fast in a simulation so you can win in the live auction.

CAPTURE REALISTIC ENGAGEMENT SIGNALS

Stated preference tells only half the story. See how respondents actually behave when your ad appears in a crowded feed. Measure the interactions that matter—likes, shares, and dwell time—to make better creative decisions.

STANDARDIZE YOUR TESTING CONDITIONS

Live social feeds are chaotic and hard to isolate. Our simulation lets you control the variables—from exposure time to exact placement—so you can compare creative concepts with total confidence.

SCHEDULE A DEMO

Simulation made simple

Build sophisticated behavioral tests in minutes. No coding. No mock-ups. Just drag and drop.

INSTANT FEED GENERATION

Auto-fill the feed with realistic content. Mirror the noise of a live environment without building manual mock-ups.

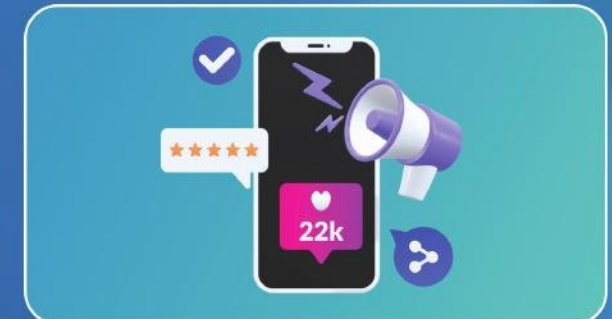

PRECISION CONTROL

Define the variables. Set platform, format, placement, and repetition to stress-test your creative.

FLEXIBLE PLATFORM SUPPORT

Switch between Instagram, Facebook, and TikTok with one click. Test where your audience lives.

ACTIONABLE BEHAVIORAL METRICS

Track views, dwell time, and interactions alongside survey data. See the behavior behind the opinion.
